Monthly Indicators

April 2013

The S&P/Case-Shiller Home Price Index recently showed that home prices in 20 major metropolitan areas had increased at the strongest pace since the bubble years. At long last, major national indices are telling the story that local MLS data users have known for months or even years. Yes, the housing market is recovering. The recovery varies by geography and market segment, but things are certainly better than they have been and are showing no signs of letting up.

New Listings were up 14.0 percent to 1,829. Pending Sales increased 17.9 percent to 1,154. Inventory shrank 18.8 percent to 4,581 units.

Prices moved higher as the Median Sales Price was up 8.1 percent to \$116,800. Days on Market decreased 4.7 percent to 82 days, the eleventh consecutive month of year-over-year declines. Months Supply of Inventory was down 25.0 percent to 5.4 months, indicating that demand increased relative to supply.

The prickliest thorns in our collective side are still lack of inventory and subdued listing activity. In some neighborhoods, consumers have 50 or 60 percent fewer options from which to choose than they did a few years ago. That's causing bidding wars in popular areas. Despite the competitive landscape for buyers, housing remains one of the brightest lights in an otherwise subdued economic recovery.

Housing Affordability Index

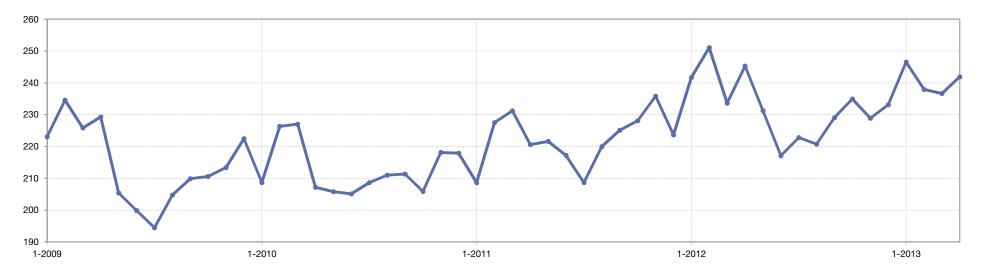

This index measures housing affordability for the region. An index of 120 means the median household income is 120% of what is necessary to qualify for the median-priced home under prevailing interest rates. A higher number means greater affordability.
